

FLECK NXT2 TIMER

SERVICE MANUAL

TABLE OF CONTENTS

IMPORTANT PLEASE READ:

- 7 The information, specifications and illustrations in this manual are based on the latest information available at the time of release. The manufacturer reserves the right to make changes at any time without notice.
- 7 This manual is intended as a guide for service of the valve only. System installation requires information from a number of suppliers not known at the time of manufacture. This product should be installed by a plumbing professional.
- 7 This unit is designed to be installed on potable water systems only.
- 7 This product must be installed in compliance with all state and municipal plumbing and electrical codes. Permits may be required at the time of installation.
- 7 It is established that when daytime water pressure exceeds 80 psi (5.5 bar), the maximum pressure rating of 125 psi (8.6 bar) can be exceeded. A pressure regulator must be installed on this system or warranty is voided.
- 7 Do not install the unit where temperatures may drop below 32°F (0°C) or above 120°F (52°C).
- 7 Do not place the unit in direct sunlight. Black units will absorb radiant heat, increasing internal temperatures.
- 7 Do not strike the valve or any of the components.
- 7 Warranty of this product extends to manufacturing defects. Misapplication of this product may result in failure to properly condition water, damage to product, or personal injury.
- 7 A prefilter should be used on installations in which free solids are present.
- 7 In some applications local municipalities treat water with Chloramines. High Chloramine levels may damage valve components.
- 7 Correct and constant voltage must be supplied to the controller to maintain proper function.
- 7 The system is intended to treat only potable quality water. It is not intended as the permanent primary treatment of water from a source that is contaminated, such as from radon, pesticides, insecticides, sewage or wastewater.
- 7 This system is not intended for use by persons (including children) with reduced physical, sensory, or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.
- 7 Children shall not play with the system.
- 7 Cleaning shall not be made by children without supervision.
- 7 Periodic cleaning and maintenance may be required to function properly.
- 7 All plumbing and electrical should be done in accordance with local codes.
- 7 An uninterrupted power supply is required. The control uses a transformer to supply 24 VDC. Please make sure your voltage supply is compatible with your unit before installation.

TIMER OPERATION

Setting the Time of Day

NOTE: Set Time of Day on any unit and the rest of the units in the system will update the Time of Day automatically.

NOTE: Press and hold the Left button to exit without saving.

Manually Initiating a Regeneration

NOTE: A manually initiated or queued regeneration can be cleared by pressing and holding the Back button. A system queued regeneration can only be cleared by stepping through a manual regeneration. If regeneration occurs for any reason prior to the delayed regeneration time, the manual regeneration request shall be cleared. Pressing the Extra Cycle button while in regeneration will cause the upper drive to advance to the next step immediately.

Timer Operation During Regeneration

CYCLE 1/5

BACKWASH

00:10:00

CYCLE 2/5

DRAW

00:60:00

CYCLE 3/5

RAPID RINSE

00:10:00

CYCLE 4/5

TANK REFILL

00:12:00

Press the Extra Cycle button during a system queued Regeneration Cycle to immediately advance the valve to the next cycle step position and resume normal step timing.

Timer Operation During Programming

Timer Operation During A Power Failure

NOTE: The time of day on the main display screen will flash for 5 minutes when there has been a power outage. The flashing of the time of day can be stopped by pressing any button on the display.

Detected Errors

- NOTE:** During the error condition, the control continues to monitor the flow meter and update the volume remaining. Once the error condition is corrected, all units return to the operating status they were in prior to the error. Regeneration queue is rebuilt according to the normal system operation. Or, if more than one unit has been queued for regeneration, then the queue is rebuilt according to which one communicates first.
